Mechanical and Industrial Engineering Department

**Area of Research: Medical Microrobotics**

**Description of Duties:** The Microrobotics Lab at the University of Toronto seeks highly qualified applicants for a postdoctoral position in microrobotics which will advance the research priorities of our group. The applicant will undertake theoretical and experimental research on this and related topics supporting the research vision of our group, which is to develop wirelessly actuated smart robots at small scales. These microrobots will enable a radical new class of non-invasive surgical, diagnostic and therapeutic procedures.

The project involves the design of a microrobotic capsule for sampling and diagnosis in the human GI tract. Research duties include:

- Mechanical design, modelling, optimization and fabrication of a pill robot for the human GI tract. Actuation of the robotic device will use magnetic fields and smart material actuators.
- Experimental testing of the design in laboratory and field (animal study) conditions in the labs of collaborators.
- Working with computational biologists to study the human microbiome in animal studies.
- Preparation of research publications and presentation of results at conferences.

**Required Qualifications:** Applicants should hold a PhD in mechanical engineering or similar. Applicants with a strong background as indicated by a robust publication record in the areas of mechanical design, robotics, magnetic actuation, medical devices, or other relevant topics are encouraged to apply. Candidates should be highly motivated, with an interest in developing next generation robotic biomedical devices.

Excellent communication skills, strong independent research skills, and leadership skill or promise are also required. The candidate will be expected to work independently, provide leadership to an interdisciplinary team of graduate students, and produce publishable results.

**Salary:** Minimum $40,000/year plus benefits

**Expect start date:** Spring 2019 or as early as possible

**Term:** 1-year term with possible renewal

**FTE:** 100%
The normal hours of work are 40 hours per week for a full-time postdoctoral fellow (pro-rated for those holding a partial appointment) recognizing that the needs of the employee’s research and training and the needs of the supervisor’s research program may require flexibility in the performance of the employee’s duties and hours of work.

**Application Instructions:** The application package (to be emailed to Eric Diller) should include a cover letter and CV, 1 writing and research excellent example, and contact information of 3 professional references.

**Supervisor:** Dr. Eric Diller, Assistant Professor
Dean's Catalyst Professor of Mechanical Engineering
Department of Mechanical & Industrial Engineering
