

Time: TBD

Room: TBD

Instructor: David Warnica

Email: david.warnica@utoronto.ca

Course Description:

- This course provides the fundamentals and applications for thermal and hydraulic design of heat exchangers. It covers a wide range of relevant topics including the main considerations for equipment selection and design, and different methods of analysis for sizing and rating. More specialized design considerations are also introduced. The objective is for students to become familiar with the design and specification of industrial heat exchangers by solving practical problems using a synthesis of other engineering subjects such as thermodynamics, heat transfer, and fluid mechanics.

Textbook: Robert W. Serth and Thomas G. Lestina, Process Heat Transfer: Principles, Applications and Rules of Thumb (Second Edition), Academic Press, 2014.

- Available through UTOR Library Online Resources
<http://www.sciencedirect.com.myaccess.library.utoronto.ca/science/book/9780123971951>

Course Outline:

1. Classification of Heat Exchangers
2. Review Heat Conduction (Ch 1) and Convective Heat Transfer (Ch 2)
3. Thermal Analysis Methods & Preliminary Design Procedures (Ch 3)
 - a. Overall Heat-Transfer Coefficient
 - b. Log-Mean Temperature Difference (LMTD)
 - c. F-Factor Method (LMTD Correction factor)
 - d. ϵ -NTU Method (Effectiveness – Number of Transfer Units)
 - e. Preliminary Design and Rating
4. Heat Exchanger Design Procedures
 - a. Double-Pipe Heat Exchangers (Ch 3 & 4)
 - b. Shell-and-Tube Heat Exchangers (Ch 3 & 5)
 - Pressure Drop Analysis
 - Delaware Method (Ch 6) & Stream Analysis Method (Ch 7)
 - Introduction to Computer Software (HTRI Xchanger Suite)
 - c. Air-Cooled (Crossflow) Heat Exchangers (Ch 12)
 - d. Plate Heat Exchangers (Ch 3)
 - e. Boilers & Evaporators (Ch 9 & 10)
 - f. Condensers (Ch 11)
5. Other Design Considerations (selected topics)
 - a. Flow-Induced Vibration (FIV) of Tubes & Tube Banks
 - b. Heat-Exchanger Networks (Ch 8)
 - Pinch Analysis & Process Integration (PI)

- Data Validation & Reconciliation (DVR)

Grading Scheme:

- Three (3) Problem Sets worth a total of 15%
- Midterm Exam worth 40%
- Design Project worth 45% (in groups of 1-2 people)

Schedule

- TBD

HTRI Xchanger Suite 8.0 Software

- Tool to design, rate, and simulate heat-exchanger performance in an integrated graphical environment;
 - Xchanger Suite Educational has three modules:
 - Xace – Air-Cooled Heat Exchangers (Crossflow)
 - Xist – Shell-and-Tube Heat Exchangers
 - Xphe – Plate-and-Frame Heat Exchangers (Compact)
 - See <https://www.htri.net/htri-xchanger-suite-educational.aspx> for other features
- Available by Remote Desktop through Engineering Computing Facility
 - See <https://ssl.ecf.utoronto.ca/ecf/services/rd>
 - Login procedure to be provided

Other Expectations:

- Class participation is highly encouraged
- Independent work on problem sets and design projects; These must be in your own words and by your own hand, spreadsheet, or other software application
- Appropriate format, contents, and quality of engineering calculations
